Type: ROUTINE INSPECTION
Date: 20-JUL-2023

3.130 Direct

Watering.

One cage of 4 breeding sugar gliders did not have water, and the cage had only one small empty water silo type bottle . The licensee immediately filled the water bottle and two females immediately drank for approximately 5 minutes. The facility added an additional water bottle to the cage at the time of inspection. Water must be provided to the animals as necessary to ensure hydration and good health. The facility must ensure that the animals have adequate access to water at all times.

Corrected immediately.

3.131(a)

Sanitation.

Animal cages contained excreta and old food on the floor, and there was a strong odor of ammonia in the room. Cleaning as often as necessary to minimize odors and avoid disease hazards from wastes ensures animal health and welfare. The facility shall ensure that animal cages are adequately cleaned.

Correct by July 21, 2023

This inspection and exit interview were conducted with the facility representative.
