Type: ROUTINE INSPECTION
Date: 20-JAN-2015

3.31(a)(1)

SANITATION.

Although the enclosures had been sanitized within the last two weeks, the owner stated that he is not sanitizing the enclosures as often as every two weeks. The animals had been treated with ivermectin per veterinary instruction at the time the pens were last sanitized. No skin problems were noted at this inspection, but the probability of a link between long periods between sanitization and skin problems is significant. Enclosures shall be sanitized at least once every 2 weeks according to regulations to prevent the spread of disease. Correct from this point forward.

An Exit briefing was conducted with the facility owner
