Type: ROUTINE INSPECTION
Date: 25-SEP-2018

3.31(a)(1)

SANITATION.

All of the enclosures had a a buildup of dark brown greasy residue on the fronts, sides, water bottles, and on the waste water piping. The licensee stated he removed the bedding from the enclosures and then sprayed a disinfectant. No detergent was used to remove the organic material and greasy residue before the sanitizing process.

The lack of removing the organic material can allow for harboring of disease and makes the sanitizing process ineffective. Primary enclosures shall be cleaned and sanitized often enough to prevent an accumulation of excreta and debris, provide however, that such enclosures shall be sanitized at least once every two weeks in a manor provided in paragraph (a)(4) of this section; to include washing and sanitizing with hot (180°F) water and soap or detergent as in a mechanical cage washer, or by washing all soiled surfaces with a detergent solution followed by a safe and effective disinfectant, or by cleaning all soiled surfaces with live steam.

To be corrected by: October 9, 2018

This inspection and exit interview were conducted with the licensee.
