ADEPT DIESEL SERVICE

Type: ROUTINE INSPECTION

Date: 05-JUN-2019

3.26(d) REPEAT

FACILITIES, INDOOR.

Interior surfaces. There are still large areas of bare wood on the floor in the guinea pig building where the white paint is worn or scratched off. The paint on the wooden floor is not holding up to daily activity such as cleaning, feeding, maintenance, and water spills. The interior building surfaces such as floors must be constructed and maintained so that they are substantially impervious to moisture and can be readily sanitized. Correct by ensuring the floor where bare wood is present is resealed or covered with an impervious surface so that it can be repeatedly cleaned, disinfected, and won't retain odors.

Remains uncorrected.

3.28(a)(1)

PRIMARY ENCLOSURES.

Approximately 10 enclosures housing 7 adult guinea pigs and their offspring each have chewed wood and missing paint on the corner supports and sides. Primary enclosures including their racks, shelving and other accessories must be constructed of smooth material which is impervious to moisture and liquids. The chewed wooden supports and sides must be resealed, repaired, or replaced so that all surfaces in contact with the guinea pigs are impervious to moisture so that they can be repeatedly cleaned and sanitized. Correct by ensuring that all surfaces in contact with the guinea pigs are impervious to liquids and moisture. Correct by July 20, 2019.

This inspection was conducted with the owner's wife and exit interview was conducted with the owner.
