Certificate: **23-A-0641**
Site: 001
DAVID AND MALINDA KING

Type: ROUTINE INSPECTION
Date: 04-MAY-2022

3.31(b) Repeat

Sanitation.

Housekeeping. The floor underneath the guinea pig racks and enclosures had accumulations of spilled feed, feces, shavings, cobwebs, and debris. Animal facilities must be kept clean to protect the animals and to maintain good husbandry practices. Ineffective cleaning and housekeeping can expose the animals to disease risks and health problems. Correct by sweeping and cleaning the floor of the animal room including under guinea pig racks and enclosures on a regular basis to remove spilled feed, feces, shavings and debris. Remains uncorrected.

3.31(c)

Sanitation.

Pest Control. A live mouse was seen eating spilled feed under the first set of guinea pig enclosures on the left side of the room. Accumulations of spilled feed, feces, shavings, and debris were present under this set of enclosures. No pest control devices were present in the guinea pig room. Failure to establish and maintain an effective control for pests can increase disease risks to the guinea pigs. Correct by establishing and maintaining an effective pest control program. In addition, clean floors regularly of spilled feed, feces, shavings, and debris to prevent pest problems. Correct by May 11, 2022.

This inspection and exit interview were conducted with the licensee.
