Type: ROUTINE INSPECTION
Date: 27-FEB-2020

3.26(b)

FACILITIES, INDOOR.

There was a strong ammonia odor throughout the guinea pig housing room. There were no vents, doors, or windows observed to be open to allow proper ventilation of the room.
Failure to provide fresh air can cause respiratory distress and expose the guinea pigs to potential disease hazards. The indoor housing facilities must be ventilated to minimize odors and ensure the health of the animals.
Correct by: March 2, 2020

3.28(a)(1)

PRIMARY ENCLOSURES.

There were 2 holes approximately 1 inch and 2 inches in size in the side wall panel of pen 5 housing 19 weanlings in which the underlying foam material was exposed. These areas are not impervious to moisture and cannot be easily cleaned and sanitized.
Surfaces that are not impervious to moisture can result in disease spread through improper sanitation. Primary enclosures must be structurally sound, maintained in good repair, and constructed of material that is impervious to moisture.
Correct by: March 26, 2020

This inspection and exit interview were conducted with the licensee.
