Type: FOCUSED INSPECTION
Date: 19-SEP-2023

2.40(b)(2) Repeat

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

There was 1 guinea pig observed with a health condition requiring treatment in accordance with the Program of Veterinary Care or consultation with the attending veterinarian. A white adult guinea pig in Pen 4 had a head tilt to the right. The licensee had not observed the health condition and was not administering any treatments. Head tilts can cause discomfort and can worsen if not treated in a timely manner. The licensee must communicate with the attending veterinarian to evaluate this animal and determine an appropriate plan for diagnosis and treatment.

3.25(a) Repeat

Facilities, general.

A feral cat was observed in the guinea pig facility and in the pens with the guinea pigs. There was an open window where the screen had fallen out that appeared to be the point of entry. The licensee replaced the screen but it was very loose and could easily fall out again. The presence of other animals in the guinea pig facility can cause distress and feral cats may carry diseases that can lead to health problems in the guinea pigs. Housing facilities must structurally sound and maintained in good repair to restrict the entrance of other animals.

This inspection and exit interview were conducted with the licensee.
