Sanitation.

The facility is not adequately cleaning the premises. In the building housing the chinchillas there is an excess of discarded bedding and fecal material on the floors between the rows of animal enclosures. There are numerous cobwebs observed throughout the facility including on top of and behind the enclosures currently housing animals. Multiple enclosures were observed with clumps of hair from the animals trapped in the wire fencing in both the front and rear of the enclosures. Hair was also seen caught on the automatic watering lines. Unused enclosures and runs that attach multiple enclosures for breeding contain multiple cobwebs trapping debris.

Failure to adequately clean the animal enclosures and the premises can lead to illness, transmission of diseases, and attract unwanted pests. The facility must ensure that the premises are kept clean and in good repair to protect the animals from injury to facilitate the prescribed husbandry practices set forth in this subpart.

This inspection and exit interview were conducted with a Facility Representative.
