2.40(a)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Licensee currently uses Sevin %5 dust to treat the dog bedding for insects. Therefore, the dogs have contact with the product on their skin, eyes, and as an inhalant. The safety data sheet for this product recommends immediate rinsing and medical treatment for similar exposures in people. Licensee shall assure that the attending veterinarian has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use. All products used for the dogs must be safe and have veterinary approval.

Correct by: From This Day Forward

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Five dogs are in need of veterinary care:

Tri-colored male hound with USDA tag #959 has moisture accumulated around his eyes. The hair around both eyes is wet with clear to opaque discharge. The lower lids of both eyes appear rolled inward causing the hair to have contact with the globe.

A tri-colored female Basset hound with USDA tag #119 has moisture accumulated around both eyes. The left eye appeared red, with yellow/green discharge adhered to the lower lid. Her nails are overgrown, and her teeth are covered with a thick layer of brown-to-grey material, with slightly swollen gums.

A red and white female Basset hound with USDA tag #715 has hazy eyes. A blue tinge is apparent over the brown color, with an increased redness over the surrounding area of the globes. The nails are excessively long, and her teeth are covered with a thick layer of brown-to-grey material that is adhered, with red, swollen gums.

A tri-colored female Basset hound (USDA tag #717) and a tan and white male hound USDA tag #970) both have teeth that are covered with a layer of brown-to-grey material that is adhered.

Inspection Report

Eye problems are painful and may lead to blindness if left untreated. Dental disease is also painful and can progress to affect multiple body systems. Overgrown nails are more prone to injury and affect the dog's mobility. Licensee must use appropriate methods to prevent, control, diagnose, and treat diseases and injuries. These dogs must be examined by a licensed veterinarian for diagnosis and treatment. Documentation of the veterinarian's assessment, treatment, and plan shall be maintained for examination by APHIS officials.
