Type: ROUTINE INSPECTION
Date: 27-OCT-2014

2.40(b)(2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Most of the dogs in the kennel had excessively long toe nails. The nails were causing the toes to curl, and could easily tear which would cause the animal pain, or could put stress on ligaments in the toes, causing the animal discomfort.

There were the dogs, Bichon # 050-096-341, Dachshund #019-884-112, Wheaton Terrier 075-075-064, and Chihuahua 050-098-842 that had a buildup of brown material on the teeth with some redness of the gums especially in the canines. Although a dental plan was written and some of the dogs had dental cleanings, the dogs have not all been checked and graded and there is no follow up of the dental plan at this time. Some measures to treat the water that can help in the prevention of dental problems have been taken, although these can help in the initial cases of dental disease are not a solution for advanced cases.

Licensee shall trim nails on all dogs. All the dogs in the kennel shall be checked by the attending veterinarian for dental issues and grade, also a plan for the dogs with dental issues must be documented. Part of the dental plan should include prevention. Hooves are currently available for most of the breeders to chew on. Correct the dental issues, by providing an adequate follow up of the dental plan for all of the dogs.

Bichon # 050-096-341 Has a low body condition also it is in an advanced state of pregnancy and has an advanced dental problem, the dental condition can be very painful and can affect the feeding in this important moment of the pregnancy, This animal must be evaluated by the attending veterinarian and a special feeding plan and/or a supplement has to be developed and continue until the return of the body condition to normal.

Correct by: Remains uncorrected.

Inspection and exit briefing conducted with the licensee.
