Type: ROUTINE INSPECTION
Date: 20-SEP-2018

3.25(d)

FACILITIES, GENERAL.

Various wastes, including bedding, hay, debris, waste water, and rodent droppings, were visualized outside approximately 60% of the primary enclosures.

Accumulations of waste in the facility can create disease hazards for guinea pigs. Disposal facilities must be utilized, and wastes must be removed and disposed of, so that vermin infestation and other disease hazards can be minimized. Presence of rodent droppings outside of the primary enclosures illustrates that vermin have been present.

Wastes that have accumulated outside primary enclosures must be removed and disposed of by the licensee so that vermin infestation, odors, and other disease hazards can be minimized.

Correct by October 1, 2018.

This inspection and exit interview were conducted with the licensee.
