#### 3.4(b)

##### Outdoor housing facilities.

The fenced yard holding four golden retrievers with a shed for a shelter building, does not have an additional area of shade being provided to protect the dogs from the direct rays of the sun. While the dogs are able to crawl under the shelter, the space does not allow for the animals to stand, sit and turn around freely. There is a large tree on the perimeter of the fence on one side, however this is not reliable year around when the leaves fall, or at certain times of the day as the sun moves changing the direction of the shade available.

It is important for there to be other options of consistent shade available to protect the animals from over heating from the direct rays of the sun. A shelter building that is not temperature regulated can be too hot for the regulated animals as an only source to avoid the sun.

The licensee must provide in addition to the shelter structure, one or more separate outside areas of shade large enough to contain all the animals at one time and protect them from the direct rays of the sun.

This inspection was an announced site approval inspection. This site is not ready for approval to conduct activity covered under your current Animal Welfare Act License.
