BAKKOM'S RABBITRY

Type: ROUTINE INSPECTION
Date: 26-MAR-2014

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Some treatments and medications being used at the facility do not have adequate written instructions from the attending veterinarian to ensure that appropriate methods are being used:

- Extra-label use of oxytetracycline, amprolium, and penicillin are being used that do not have written instructions for rabbits.
- A new vaccine is being used for the rabbits that is not formally approved in writing by the attending veterinarian.
- Treatment for eye conditions are not adequately described in the Plan of Veterinary Care.

Extra-label use of medications (use for animals that the manufacturer's label does not have instructions for) must have a description of the dose, route, and reason for why the medication is being given. This is to prevent animals from receiving too little or too much of a medication. Treatments and preventive care methods must be adequately described and guided by the attending veterinarian. Contact the veterinarian to update the Program of Veterinary Care so that it accurately reflects and guides the treatments and preventive care methods that are being currently used at the facility.

Correct by April 4, 2014

Inspection and exit briefing conducted with facility representative.

Additional Inspectors

Sime Debra, Veterinary Medical Officer
