Type: ROUTINE INSPECTION
Date: 29-OCT-2014

3.25(d) REPEAT

FACILITIES, GENERAL.

In the upper and lower buildings, there was an excessive amount of dust, debris and cobwebs on the walls of the buildings. Build-up of dust, debris and cobwebs increases the risks for vermin infestation, sickness, and create a fire hazard. Areas outside of enclosures must be cleaned routinely and kept free from a build-up of dust, debris and cobwebs.

3.26(a)(2)

FACILITIES, INDOOR.

Many enclosures had wet and soiled bedding around the watering area in a manner that makes the guinea pigs get their feet wet when they need to drink. Not having dry access to water could cause skin problems on the guinea pigs' legs and feet or cause them to not drink enough water and become sick. Guinea pigs' access to water must be maintained dry on a daily basis to protect their health.

Correct by October 30, 2014.

Exit interview conducted with facility representative.
