3.6(a)(2)(i)

Primary enclosures.

The outdoor runs have cut wire panels that have rough/sharp edges on top that the larger dogs could stand up and touch. The facility has materials to cover these and has covered one side, however still needs to cover the rest of the panel tops for 6 dogs. Ensure that the remaining tops are covered to prevent areas that can injure the dogs.

***Correct by 4/9/2022.

3.6(a)(2)(xii)

Primary enclosures.

An outdoor floor panel for two dogs sags 6 inches when they walk on it. Flooring that sags is not structurally sound and could create a condition that injures dogs or allows them to get out. Ensure that this section of floor and all flooring is structurally sound to prevent injury to the dogs.

***Correct by 4/6/2022.

This inspection and exit interview were conducted with a facility representative.
