Type: ROUTINE INSPECTION
Date: 12-APR-2023

3.3(a) Direct

Sheltered housing facilities.

During inspection, shortly after I started the inspection at 2:28 PM, the temperature in the kennel was approximately 91 degrees Fahrenheit. Upon my encouragement, the licensee opened windows, opened doors, and set up a fan. The temperature dropped very little during the inspection. Prior to my departure, the temperature in the kennel was 88 degrees Fahrenheit which was recorded at 6:31 PM. The temperature stayed above 85 degrees Fahrenheit in the kennel during the entire inspection. When I measured the temperature at 6:31 PM, I observed 21 puppies in four enclosures to be sprawled out and scattered throughout all 4 enclosures. They were not huddled up close to each other the way a litter of puppies would normally be observed. This behavior indicates the puppies were too hot and uncomfortable. The licensee must ensure the kennel temperature does not rise above 85 degrees Fahrenheit when dogs are present. If there is any indication the temperature could stay above 85 degrees Fahrenheit for an extended period of time, the licensee should take steps to lower the temperature. Correct starting on 4/13/23.

3.13(a)(3)

Veterinary care for dogs.

14 adult dogs were overdue on their distemper and parvo shots from a few days to a few months. Not having all adult dogs up to date on their distemper and parvo shots doesn't ensure they are adequately protected against distemper and parvo. All adult dogs must be kept up to date on their distemper and parvo vaccines. Correct by 4/20/23.
