JEAN BUEHL

Type: ROUTINE INSPECTION
Date: 21-JUL-2015

2.75(b)(1) REPEAT

RECORDS: DEALERS AND EXHIBITORS.

Records requirements.

The facility is not maintaining records. Disposition records are not being made to indicate the name and address of the individual receiving the animals, the number and species of animals leaving the premise and the date of disposition. This includes the animals present on the previous inspection: 6 rabbits, 2 guinea pigs and 44 hamsters. Additionally, acquisition records are also not complete. There were a few acquisition records for animals acquired from one USDA licensed dealer but no other acquisition records have been maintained. This includes records for offspring born on the premises. Incomplete records does not allow for tracking of the animals, ensuring that they came from proper sources and does not allow for monitoring of mortality. The licensee must develop and maintain complete and up-to-date records that contain all required information.

3.25(d)

FACILITIES, GENERAL.

Waste disposal.

There were several used empty enclosures that have not been cleaned and disinfected being stored next to occupied enclosures for 28 hamsters and 3 guinea pigs. Food with mold present was found in one dish, the trays underneath contained excreta, food waste, excess water, mold and soiled shavings and the enclosures with solid floors contained soiled shavings, excreta and food waste. The presence of this waste in empty enclosures could attract insects and vermin, increase odors and increase health risks to the animals. Provisions for waste disposal must be made for removal and disposal of animal and food wastes, bedding and debris. Correct by 7/23/15.

3.50(c)

FACILITIES, GENERAL.

Storage.

There were two open bags of rabbit feed that were not stored in containers. The feed was not protected from

Inspection Report

excess moisture and was moldy. The feed is contaminated and must not be used for the animals as it could result in illness. The contaminated feed must be disposed of to protect the animals and maintain future food storage in a manner that protects it from spoilage, contamination and infestation. Correct by 7/23/15.

3.50(d)

FACILITIES, GENERAL.

Waste disposal.

There were several used empty enclosures that have not been cleaned and disinfected being stored next to occupied enclosures for 4 rabbits. Food with mold present was found in one dish, the trays underneath contained excreta, food waste, excess water, mold and/or soiled shavings and the enclosures with solid floors contained soiled shavings, excreta and food waste. The presence of this waste in empty enclosures could attract insects and vermin, increase odors and increase health risks to the animals. Provisions for waste disposal must be made for removal and disposal of animal and food wastes, bedding and debris. Correct by 7/23/15.

3.56(a)(1)

SANITATION.

Cleaning of primary enclosures.

The two rabbit enclosures had mold present on the waste collected in the trays underneath the wire mesh flooring. The waste consisted of excreta, food waste and soiled shavings. The presence of the mold could increase risk of health hazards and the enclosures must be cleaned and maintained on a more regular basis to prevent these risks. Correct by 7/23/15.

Inspection and exit briefing conducted with the owner.
