2.131(e) Critical

Handling of animals.

On 8-July-2023, female pug "Miranda" MC#956000011835411 was let out to exercise for approximately under an hour and overheated resulting in her death. The weather forecast for this day according to The Weather Channel was a high of 79 degrees Fahrenheit. The facility representative states they supervised Miranda playing with family members in an outdoor exercise yard and was brought back inside the kennel when finished. An approximate ~5 minutes later a facility representative found her unresponsive in her primary enclosure. The representative tried to cool her off but Miranda passed away shortly after she was found before a veterinarian could be consulted.

When climatic conditions present a threat to an animal's health or well-being, appropriate measures must be taken to alleviate the impact of those conditions. An animal may never be subjected to any combination of temperature, humidity, and time that is detrimental to the animal's health or well-being, taking into consideration such factors as the animal's age, species, breed, overall health status, and acclimation. The facility must ensure the animals are housed and exercised in appropriate climatic conditions at all time. The facility has since then taken appropriate action to avoid any dog from overheating.

To be corrected by: 25-July-2023.

This inspection and exit interview were conducted with a facility representative.
