Type: ROUTINE INSPECTION
Date: 14-SEP-2016

3.1(c)(1)(i)

HOUSING FACILITIES, GENERAL.

* 11 metal dividers in the kennel had paint that came off along the bottom of the dividers. This is exposing bare metal that is excessively rusty and flaking. Three metal self-feeders were excessively rusty and flaking around the area of the feeders where the dogs eat. These excessively rusty and flaking surfaces cannot be properly cleaned and sanitized. Thus, increasing the disease potential and affecting the structural integrity of the surfaces affecting 29 adult dogs..

All metal surfaces must be kept free of rust that prevents required cleaning and sanitization. Metal surfaces free of rust will also maintain the structural integrity. With required cleaning and sanitization, the disease potential is reduced for the animals.

To be corrected by, 19-November-2016.

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

* The outside enclosures with concrete flooring had an accumulation of fecal waste on the concrete. Four enclosures had the fecal waste smeared onto the concrete surface. The owner stated it had been a few days since the enclosures were cleaned because of the rain. The accumulation of fecal waste can increase the disease potential for the 20 adult dogs.

All hard surfaces must be spot-cleaned daily and sanitized as often as necessary for the prevention of disease hazards to the dogs.

To be corrected by, 21-September-2016.

This inspection and exit interview were conducted with the facility representative and Randall Wagner (ACI).

This inspection will be sent by e-mail.
