Type: ROUTINE INSPECTION
Date: 15-FEB-2023

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

Expired vaccines were stored in the dog kennel refrigerator. One box expired October 2022 and 2-February-2023, the facility was unaware these were expired. Expired vaccinations may not properly protect the dogs from the diseases they are being vaccinated against. Each dealer shall establish and maintain programs of adequate veterinary care that include the use of appropriate methods to prevent, control, diagnose and treat diseases. The facility must ensure that all vaccines and medications are not expired at all times.

This was corrected at the time of inspection.

Six adult dogs were behind on their annual 7-way vaccine; Sam (MC# 991001003877868), Moonshadow (MC# 991001003877862), Bella Blue (MC# 992000001094461), Paris (MC# 992000001094484), Austin (MC# 7E10066947), Shania (992000001094460). Dogs not kept up to date on vaccines may contract contagious and/or deadly diseases, which may cause unnecessary pain and discomfort.

Each dealer must follow an appropriate program of veterinary care for dogs that is developed, documented in writing, and signed by the attending veterinarian. The facility must follow the vaccine schedule written in the Program of Veterinary Care to protect the dogs from these contagious and/or deadly diseases. The facility must vaccinate all dogs in need of the vaccines listed above, keep a written and updated vaccine record and maintain the vaccine schedule in all dogs from this

Inspection Report

day forward.

To be corrected by: 24-February-2023

Several dogs were identified by the Attending Veterinarian during the annual head-to-tail exams on 12-December-2022 in need of a dental cleaning or additional bloodwork and urine analysis. The facility has had some dog's dental cleanings done, but 18 adult dogs have not had a cleaning and do not have a scheduled appointment at the time of inspection. These dogs are Alexa (MC# 933041000045680), Tiffanie (MC# 99100100038628), Sam (MC# 991001003877868), Ursula (MC# 7E10066945), Mulan (MC# 933041000045688), Biscuit (MC# 992000001094485), Hooligan (MC# 933000320068775), Banshee (MC# 7E10066934), Cosmopolitan (MC# 992000001094468), Pete the Man (MC# 7E10066940), Quincy (MC# 933000320515491), Lilly (MC# 7E10066953), Honey (MC# 0A02373343), Fancy (MC# 933041000045699), Maggie (MC# 933041000045698), Mya (MC# 993041000045676), Shilo (MC# 992000001094462), Mercedes (MC# 993000320515485). Additionally, the attending veterinarian recommended Alexa (MC# 933041000045680) have blood work and urinalysis completed to aid in diagnosing weight loss that was identified during the veterinary head to tail exam.

Dental cleaning procedures and additional diagnostic testing recommended by the attending veterinarian are necessary to ensure the dogs are provided adequate veterinary care. Each dealer shall establish and maintain programs of adequate veterinary care that include the use of appropriate methods to prevent, control, diagnose and treat diseases. The facility must have the dogs evaluated by a licensed veterinarian and have treatment plans developed.

Inspection Report

The facility uses microchips placed under the skin as their form of official identification for dogs over 16 weeks of age. There were 3 dogs over the age of 16 weeks that were being identified by the official number that was assigned to them at birth on a cage card. Cage cards are not an acceptable form of official identification for dogs over 16 weeks of age. An acceptable form of official identification (listed below) is necessary for APHIS officials to positively identify animals for inspection and to properly trace their movements.

All live dogs over the age of 16 weeks shall be identified by an official tag affixed to a collar around the animal's neck, by a legible tattoo marking approved by the Administrator, or by a microchip placed under the dog's skin. The licensee must apply one of these forms of identification to the three adult dogs. The licensee must ensure that all dogs have the correct type of official form of identification at all times.

This was corrected at the time of inspection.

3.1(b)

Housing facilities, general.

The facility has an assortment of clutter taking up a portion of the food storage area and a portion of the kennel's whelping room, which currently holds no dogs. The clutter consisted of empty feed bags, dog beds, dog crates, leaf blower, kennel dryer and various plastic items.

Clutter stored in animal areas could accumulate dust and dirt and could attract vermin. Animal and food storage areas inside of housing facilities must be kept neat and free of clutter to ensure the animal's overall health and well-being.

The facility must remove the clutter from the food storage area and whelping room and ensure that all housing areas remain free from clutter at all times.

To be corrected by 10-March-2023.

3.8

Exercise for dogs.

Date:

16-FEB-2023

Inspection Report

The facility has an exercise plan but it has not been signed by the Attending Veterinarian. Dealers must develop, document, and follow an appropriate plan to provide dogs with the opportunity for exercise. The facility must have the exercise plan signed and approved by the Attending Veterinarian and follow the exercise plan for each dog over 12 weeks of age.

To be corrected by: 3-March-2023

3.13(b)(1)

Veterinary care for dogs.

The facility is missing written medical records of Vectra being given to each adult dog monthly as the Program of Veterinary Care states. The lack of medical records makes it difficult to determine if the animals are receiving the preventative medical treatments. This information is needed for APHIS inspectors to ensure the medical care is being provided by the facility.

The facility must maintain complete and maintain updated medical records including the identity of the animal, including identifying marks, tattoos, or tags on the animal and the animal's breed, sex, and age; Provided, however, that routine husbandry, such as vaccinations, preventive medical procedures, or treatments, performed on all animals in a group (or herd), may be kept on a single record.

To be corrected by: 2-March-2023.

This inspection and exit interview were conducted with facility representative.
