Type: ROUTINE INSPECTION  
Date: 22-JAN-2020

---

### 3.3(a)

#### SHELTERED HOUSING FACILITIES.

\*\*\*Two enclosures in the sheltered building were observed with below acceptable temperatures. One enclosure housed 2 Dachsund and 7 Labrador Retriever weaned puppies. This enclosure was approximately 42 degree F as measured with a Kestrel instrument. Another enclosure housed two adult Dachshunds and was measured at approximately 40 degrees F. A wood burning stove was in use in this building as well as heat lamps in other enclosures. The two cited enclosures did have solid resting surfaces and the enclosure with the puppies did have dry bedding provided; however, the puppies were huddling together in a pile. Dogs exposed to insufficient temperatures can become stressed and more susceptible to diseases. All enclosures in sheltered buildings must be maintained at 50 degrees F or above unless resting boards and/or bedding are provided. Ambient temperatures must not remain below 45 degrees F for more than 4 consecutive hours. To be corrected by: 01/22/20

### 3.11(a)

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

\*\*\*The exterior portion of the enclosures of the sheltered building and the outdoor gravel runs have not been spot cleaned in at least two days as per the owner's statement. The number of dogs within the enclosures and the lack of cleaning has led to the enclosures, shelters and dogs becoming soiled with feces. A concrete run housing 7 young adult dogs was extremely soiled and covered with feces making it difficult for the dogs to not contact the feces. All enclosures must be spot cleaned at least once daily or more frequently if necessary to prevent soiling of the enclosure or dogs, reduce disease and pest hazards. This affects 50 adult dogs. To be corrected by: 01/23/20

This inspection and exit interview were conducted with the owner.
