Type: ROUTINE INSPECTION  
Date: 21-JUN-2017

### 2.40(b)(2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

\*\*\*Female Shih Tzu #163 had pink tissue about the size of a pea near the tear duct area of the right eye, protruding out onto the eye. On this same dog, the ID chain was tight and had caused sores around the dogs neck. These sores were open lesions under the chain, and reddish skin around the same areas as the lesions. There was also blood like matter on the left side of the dog between the ear and front shoulder. The hair was missing around the neck in the area of the chain and lesions. The lesions were about 1/4" - 1/2" wide and circling the neck. A female Maltese #142 was limping on its right front leg. After the licensee pulled the dog out, the inspector pointed out to the licensee, the right foot (wrist area) could easily be felt moving in a direction that is not the normal direction the foot should move. The licensee also felt the foot and acknowledged it was moving wrong. These abnormal appearing areas and sores could be the result of injury, infection or a variety of veterinary medical conditions which may be painful. The licensee must have these dogs examined by a veterinarian in order to ensure that accurate diagnoses are obtained and appropriate treatment plans are developed and followed. The licensee must ensure that all animals receive adequate veterinary care at all times.  
To be corrected by: June 23, 2017.

### 3.11(d)

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

##### Pest Control.

\*\*\*Throughout the facility, excessive flies were noticed around the animals, on the ground near animals, and food and water waste located inside the dogs' enclosures. These flies were concentrated around feces in the enclosures as well as around food on the ground that had fallen to the ground or had been cleaned out of feeders. Many damp areas in the pens also had many flies around those spots in the enclosures. Pests, such as flies, increase the risk of disease hazards. The licensee must develop a program of safe and effective pest control to reduce or eliminate the population of flies.  
To be corrected by: June 24, 2017.

This inspection and exit interview were conducted with the licensee.
