Site: 001

LEAH J. ZOOK, PETIE S. ZOOK

Type: ROUTINE INSPECTION

Date: 14-DEC-2020

3.1(c)(1)

Housing facilities, general.

In the outdoor enclosures, the pen dividers are constructed of chain link fence with metal pipe along the top and bottom to hold the wire tight. Five of the sections on the bottom pipe have excessive rust on their surfaces. The rust has caused 2 sections of pipe to rust entirely through so there is no connection with the fence to keep it tight. The two sections have sharp, jagged edges from the deteriorated metal. These rusted surfaces cannot be readily cleaned and sanitized and have no structural strength. The jagged edges could cause injury to the dogs as they move about. These pipes must be repaired or replaced to allow the proper cleaning and sanitizing and to prevent injury to the dogs.

To be corrected by: 5 January 2021

This inspection and exit interview were conducted with facility representatives.
