Type: NEW SITE INSPECTION

Date: 16-SEP-2021

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

A female Golden Retriever (no ID) was occasionally was limping on her right front leg. When questioned, the licensee stated the dog was born with missing toes. When asked for documentation the licensee stated he didn't have any, but dog was that way when the attending vet did their hands on exam back in April. When looking at the dog more closely, she was walking on her wrist versus on her pads. (carpal and meta carpal) When the dog used her right front leg the pads of the foot and the dewclaw pad were in contact with the ground. The limping front legs could be the result of an injury or other medical condition. The licensee must consult a veterinarian and keep medical records about this dogs' condition.

2.50(a)(1)

Time and method of identification.

A female Golden retriever did not have an ID. Identification is necessary to properly complete any required documents and for APHIS officials to identify dogs and trace dogs back to their origins. The licensee must ensure that all dogs at the facility have proper identification at all times.

3.4(b)

Outdoor housing facilities.

Inspection Report

In one enclosure containing 6 dogs there were not enough dog shelters for all the dogs. If dogs don't have enough dog shelters for all the dogs, some of them may not be protected from the elements. The licensee must ensure there are enough shelters for all the dogs to sit, stand, and lay, freely and normally.

3.4(c)

Outdoor housing facilities.

The facility only had half of the concrete floor sealed and impervious to moisture. These enclosures also had some cracks in the concrete. Enclosures with cracks in the concrete and concrete flooring that is not impervious to moisture can harbor diseases and odors that attract pests. The licensee must ensure all surfaces in contact with animals must be impervious to moisture.

3.6(a)(2)(i)

Primary enclosures.

There were broken tie wires in the enclosures. These wires were used to fasten the the wire panels to divide the enclosures. The broken tie wires were sharp points protruding into the enclosures at the animals height. These sharp points could injure the dogs. The licensee must ensure all enclosures are free of sharp points and edges.

3.11(c)

Cleaning, sanitization, housekeeping, and pest control.

Along two sides of the enclosures there were tall weeds growing into the enclosure. Tall weeds can harbor pests that can cause harm to the dogs. The licensee must cut the weeds around the enclosure and keep them controlled at all times.

3.11(d)

Cleaning, sanitization, housekeeping, and pest control.

On part of the enclosures there is a lean-to for shade. On the ceiling of the lean-to above the enclosures, there are several wasp nests. These wasp nests indicate wasps could be around and could sting and cause harm to the dogs. The licensee must safely remove the wasp nests and prevent wasps from living around the dogs.
