Type: ROUTINE INSPECTION
Date: 05-JUL-2023

2.40(b)(2) **Direct** **Repeat**

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

* A female, Miniature Pinscher (ID # 933041000002684) was seen squinting with a glob of whitish colored discharge in the outer corner of the right eye. Under the glob of discharge the eyelid appeared slightly crusted over. Upon examination of the eye an indentation (approximate size the tip of a ballpoint pen) was observed. Eye issues may be painful and indicative of injury, irritation or other medical conditions. Licensee must ensure this dog is examined by a veterinarian to prevent further pain, suffering or damage to the eye as soon as possible (preferably within a couple of days.) DIRECT

- The toenails on the dog's feet were long with at least one of them curving around causing the toe to splay to the side while walking. Long toenails can be painful and impair the dogs ability to maintain correct posture during normal movement. Licensee must trim toenails and maintain appropriate length to allow for normal movement and minimize injury.

* The following medication was past the labeled expiration date: Metronidazole Tablets 250 mg – August 2022. This medication was intermingled with other products that are currently being used at the facility (110 dogs) and therefore was ready for use. Expired drugs may not work as anticipated, could become contaminated, and could harm the animals. The licensee must ensure that all medications used in the facility are not expired, labeled properly in accordance with standard veterinary practices, and are stored in accordance with manufacturer's recommendations.

This inspection and phone exit interview were conducted with the facility representative.
