Type: ROUTINE INSPECTION
Date: 05-AUG-2016

2.50(a)(1)

TIME AND METHOD OF IDENTIFICATION.

* Three kittens and seven puppies were not properly identified. Identification is required in order to ensure that each animal's identity can be known with certainty and to facilitate record keeping requirements.

To be corrected by, 11-August-2016.

3.1(c)(2)

HOUSING FACILITIES, GENERAL.

* Five enclosures had vinyl covered panel flooring. In areas, the vinyl had come off the metal paneling exposing bare metal. This exposed metal was corroding. These surfaces cannot be properly cleaned and sanitized. Therefore, increase disease potential for 16 puppies.

All surfaces must be maintained and kept in good repair. Proper cleaning and sanitization of surfaces will prevent the disease potential to the animals.

To be corrected by, 25-August-2016.

3.6(a)(2)(2)

PRIMARY ENCLOSURES.

* There was a paneled enclosure housing seven puppies. The back panel had an approximately 4 inch by 4 inch hole where the vertical wire strands broke off. There was a protruding point as a result of one the strands that broke off. This broke wire was producing upward. The protruding wire could injure the puppies. The puppies could get stuck in the hole from trying to get out of the enclosure through the hole, thus getting injured.

For the prevention of injury, all enclosures must be kept and maintained in good repair.
