Type: ROUTINE INSPECTION
Date: 03-AUG-2015

2.40(b)(2) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

There are two spots of loose, bloody, mucous stools in the outdoor portion of one enclosure of the west sheltered building. There are three dogs housed in this enclosure- a Yorkshire terrier, a shih Tzu and a mixed breed and it was not determined which dog produced the stools. Loose, bloody, mucous stools may be caused by infections, parasites or disease. These three dogs must be examined by a veterinarian to determine the cause and treatment. These findings by the veterinarian must be recorded in writing and presented to the USDA inspector. Correct by close of business 5 August 2015.

2.75(a)(1)

RECORDS: DEALERS AND EXHIBITORS.

The current 7005 inventory forms are not complete. These forms are missing the Date of Birth, Date Acquired and Address and USDA license number or driver's license and state and vehicle license number and state of whom these dogs were acquired. Incomplete records do not allow the accurate tracking of the dogs in the kennel. All required information must be accurately recorded on the inventory sheets. Correct by 3 Sept. 2015.

3.1(c)(1)(1)

HOUSING FACILITIES, GENERAL.

There is a rusted section of the west sheltered housing facility building affecting one enclosure. Surfaces that are rusted cannot be adequately cleaned and sanitized and the structural strength may be compromised. All surfaces in contact with the dogs must be constructed in a manner that are free from excessive rust. Correct by 3 Sept. 2015.

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

There is an accumulation of mud and feces in two of the indoor enclosures of one sheltered housing facility. The owner stated that it had been one week since the concrete floor of this building had been cleaned. Contaminated surfaces can contribute to an increase in disease transmission. All hard surfaces with which the dogs come in

Inspection Report

contact must be spot-cleaned on a daily basis. Correct by 4 August 2015.

3.3(a)

SHELTERED HOUSING FACILITIES.

The ambient indoor temperature at approximately 10AM in one of the metal sheltered buildings was 88 degrees F as measured by the inspector's Kestrel. This temperature was 3-4 degrees F warmer than the outdoor temperature. A fan was provided in the building for the dogs. Cooling units have been used in the past to regulate the temperature in the two sheltered buildings. One stopped working several weeks ago and has not been replaced and the owner disconnected the other one. Temperatures above 85 degrees F in the sheltered building may cause discomfort to the dogs and make it difficult for the dogs to adequately thermo-regulate. The temperature inside the sheltered portion of sheltered housing facilities must not rise above 85 degrees F for more than 4 consecutive hours. Correct by 10 August 2015.

3.6(a)(2)(1)

PRIMARY ENCLOSURES.

There are several places through-out the kennel where wire points are present. These include in one enclosure of the west sheltered kennel building, in one free-standing enclosure in the tractor shed and in the outdoor boxer enclosure. Sharp points may cause injury to the dogs. All primary enclosures must be constructed and maintained so that they do not have any sharp points that may injure the dogs. Correct by 24 August 2015.

This routine inspection was conducted on 3 August 2015 with the licensee, Kendall Lundy, ACI and the KDA inspector.

The exit interview was conducted on 6 August 2015 with the licensee and Kendall Lundy, ACI.
