2.40(b)(2)

Repeat

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

Female Eskimo (microchip # 932002000583, DOB 01-14-19) has poor dental health. Nearly the entire surface of the upper right and left cheek teeth are encased in a yellow-grey colored organic material. At least 3/4ths of the surface of the upper right and left canine teeth are covered in the material and a thin build up of the material is located on the surface of the upper front teeth. Poor dental health could cause pain and discomfort to the dog as well as lead to further health issues.

Each dealer shall use appropriate methods to prevent, control, diagnose, and treat diseases and injuries. This dog must be evaluated by a veterinarian for an accurate diagnosis and to develop an effective treatment plan. The licensee must ensure each dog receives adequate veterinary care at all times.

This inspection and exit interview were conducted with the facility representative.

Additional Inspectors:

Emily Steele, VETERINARY MEDICAL OFFICER
