Worms Wiggle In LLC

Type: ROUTINE INSPECTION
Date: 13-OCT-2022

2.126(a)(2)

Access and inspection of records and property; submission of itineraries.

Records of animal acquisitions & dispositions, the program of veterinary care, or animal inventory were not available for review at the time of inspection. Failure to provide these documents hinders APHIS officials from assessing the facility's compliance with the Attending Veterinarian's instructions included in the PVC and tracking animal movements. The licensee must allow APHIS officials to examine records required to be kept by the AWA.

To be corrected by October 20th, 2022

3.125(a)

Facilities, general.

The hide structure (purple plastic) in one of the spiny mouse enclosures showed significant damage from routine wear and tear. It provided insufficient hide opportunity for the number of animals in the enclosure (>22) as only 5-10 animals could fit under it at a time. Indoor housing facilities should be maintained in good repair to protect the animals from injury and contain the animals.

To be corrected by October 19th, 2022

3.131(a)

Sanitation.

Inspection Report

There was a build up of fecal material in 2 enclosures containing a male southern opossum and a male hedgehog. Build ups of fecal material attracts pests and poses disease hazards to the animals. Excreta should be removed from primary enclosures as often as necessary to prevent contamination of the animals and to minimize disease hazards and to reduce odors. The licensee needs to increase the frequency of checking and cleaning primary enclosures to ensure that waste material is not accumulating.

To be corrected by October 19th, 2022

3.131(c)

Sanitation.

The floor of the main show room of the facility had bedding material, dead insect pests and other debris scattered around. These accumulations can attract other insect and mammalian pests and pose disease hazards to the regulated animals. The premises shall be kept clean and in good repair to facilitate the proper husbandry of the regulated animals.

To be corrected by October 21, 2022.

3.131(d)

Sanitation.

Soldier flies that the licensee maintains as larvae to feed insectivore species pupated, emerged as adults and overwhelmed the facility. There was an excessive amount of these insects around the primary enclosures of regulated species and exposed the animals to disease risks. The licensee's current pest control plan is ineffective. The licensee must maintain an effective pest control program to control insects, ectoparasites, avian and mammalian pests.

To be corrected by October 21, 2022.

This inspection and exit interview were conducted with the facility representative.
