Type: ROUTINE INSPECTION
Date: 13-OCT-2015

2.40(b)(2) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*** A female Min Pin, ID number 59, was observed with a abdominal mass approximately the size of a tennis ball. The designated person stated this dog had a surgical procedure approximately 1 year ago in the same area of the mass. She stated the mass had been increasing in size the last few months. At this time the dog has not been seen by a licensed veterinarian to diagnose and treat this condition.

A female YorkiePoo, ID number 52, was observed with a very thin coat of rough hair. The body condition of this dog is very poor with the hip and vertebra structures easily visible. Observation of the mouth revealed multiple teeth were missing but also excessive accumulations of brownish material on the upper cheek teeth. The designated person stated this dog had whelped approximately 4 months ago and subsequently lost all puppies. At that time the attending veterinarian had been consulted and treatment provided. Since that time the dog has gradually been losing weight. the designated person stated she had tried multiple diets and dewormings but had not consulted with a licensed veterinarian in the last three months. At this time the body conditions of this dog indicate she has very limited reserves and with a thinning hair coat she is in physical distress and requires medical treatment.

In both of these situations these dogs must be examined by a licensed veterinarian for an appropriate diagnosis and treatment program. Lack of diagnosis and treatment of unknown conditions is dangerous to the health of these dogs. Documentation must be maintained of diagnosis and treatment plans for these dogs for review on re-inspection of these dogs. To be corrected by: 10/14/15

This inspection and exit interview was conducted with the designated person by Curt McGruder-ACI.
