ALISON HAWKINS

Type: ROUTINE INSPECTION
Date: 29-JAN-2015

3.6(a)(1)

PRIMARY ENCLOSURES.

On the south building the east side has a center washdown that is part of the structural strength of the kennel. as the cages are attached to the washdown. There is a broken spot on the middle upright pipe where the washdown is broken loose. this has let the bottom row of cages sag down and the upper washdown is curved twisted with a lot of pressure on the plastic structure. This needs to be kept in good repair at all times.

This needs to be corrected to maintain the structural strength of the kennel and to protect the animals from injury.
To be corrected by February 8 2015

Exit interview conducted with facility representative.
