Type: RE-LICENSE INSPECTION
Date: 20-SEP-2021

3.1(c)(1)(i)

Housing facilities, general.

The wire doors of the outside enclosures for the small dogs had rust. Also the fences supports for the large dog outside enclosures had excessive rust.

Rust will continue to deteriorate the integrity of the wire cage doors and affect the effectiveness of disinfectants and cleaning products by providing a rough surface where bacteria can grow.

The surfaces of housing facilities - including houses, dens, and other furniture-type fixtures and objects within the facility - must be constructed in a manner and made of materials that allow them to be readily cleaned and sanitized, or removed or replaced when worn or soiled. Any surfaces that come in contact with dogs must: be free of excessive rust that prevents the required cleaning and sanitization, or that affects the structural strength of the surface.

3.1(c)(1)(ii)

Housing facilities, general.

There were sharp points of wire sticking into the enclosures used in the outdoor large dog runs to secure the fencing.

Inspection Report

Sharp points can injure a dog's eyes, skin and feet and should not be present in enclosures.

Any surface that comes in contact with dogs must be free of jagged edges or sharp points that might injure the animals.

3.1(e)

Housing facilities, general.

There was a bucket containing a sprayer that had been used with an insecticide sitting on top of the bags of dog food in the storage building.

If any contents of the bucket were to spill or leak onto the bags of dog food it could contaminate the food.

Supplies of food and bedding must be stored in a manner that protects the supplies from spoilage, contamination, and vermin infestation. Substances that are toxic to dogs but are required for normal husbandry practices must not be stored in food storage and preparation areas but may be stored in cabinets in the animal areas.

3.13(a)(2)

Veterinary care for dogs.

There was no record(s) to show that a complete physical exam from head to tail of each dog had been performed by the attending veterinarian.

To be in compliance with the Animal Welfare Regulations there needs to be records available at time of inspection to document that the work/examinations were done.

To ensure the adequacy of veterinary care and other aspects of animal care and use - a complete physical examination

Inspection Report

from head to tail of each dog by the attending veterinarian not less than once every 12 months must be completed and documented.

3.13(b)(4)

Veterinary care for dogs.

There were no results from the attending veterinarian's heartworm and fecal exam. There was no reference as to which dog was tested and no record available at time of inspection.

It is important to know test results so that necessary follow up and treatment can occur for the animal that has been tested.

The dates and findings/results of all screening, routine, or other required or recommended test or examination.

This is a 1st Re-License Inspection for a Class A license. The inspection and exit briefing were conducted with the applicant. The applicant has 60 days and two more inspections to pass the relicense application. Please call the inspector when you are ready for your second inspection.
