

Inspection Report

Tyler Cleckley
11706 Dorrance
Stafford, TX 77477

Customer ID: **41415**
Certificate: **74-A-1451**
Site: 002
Tyler Cleckley

Type: ROUTINE INSPECTION
Date: 09-SEP-2015

2.75(b)(1) REPEAT

RECORDS: DEALERS AND EXHIBITORS.

There are no written records annotating where animals on the facility were acquired from. A primate was sold within the last week but no receipt of information of the sale could be produced. Without adequate records keeping, there is no way to properly track animals acquisition or disposition. Create a written inventory of animals with all pertinent information required.

3.75(e) REPEAT

HOUSING FACILITIES, GENERAL.

The refrigerator currently being used for non human primate food continues to be soiled with bits of food waste on the walls and shelves. There are green vegetables in the fridge that are soiled and rotting, and pinky mice in the freezer that are not going to be used. There is a risk of contamination if food is not properly stored in a clean environment. Sanitize the animal food storage area and ensure that no other items are stored on or around them.

3.78(b) REPEAT

OUTDOOR HOUSING FACILITIES.

An enclosure housing 2 adult macaques has only one small wooden shelter which is not large enough to house both animals at the same time without possible discomfort to the animals. There is a risk of health and safety by not providing animals with shelter from the elements. Adequate shelter for all animals in outdoor enclosures must be provided. Provide enough shelter to adequately house all animals in the above mentioned enclosure.

3.84(c) REPEAT

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

*A Piece of hard metal wire was noted on the floor of the macaques enclosure.

*Multiple items of trash such as construction material, metal bowls, and unused tools were seen inside the perimeter fence around primary enclosures.

Prepared By: BRENTON COX, A C I USDA, APHIS, Animal Care

Inspection Report

Trash or chemicals, if accidentally ingested by the animals could cause serious life threatening illness. Unused tools or construction items could potentially pose a health or safety hazard and can house pests. Premises, including housing facilities and primary enclosures must be kept free of trash and discarded materials to meet acceptable housekeeping standards and protect the animals from injury.

3.127(d) REPEAT

FACILITIES, OUTDOOR.

*On the north end of the facility there is 1 area between the lemur enclosures and the perimeter fence that is not at least 3 feet apart, making it hazardous to walk between.

The perimeter fence must be kept in good repair and kept closed to prevent unwanted animals and persons from gaining access to the facility, and to function as a secondary containment system in case of animal escape. Visual and physical access of the fence must be maintained so that the fence can be inspected for structural integrity and repairs. Ensure perimeter fence is at least three feet away from all primary enclosures in order for it to be safely inspected.

Inspection was conducted on 9/9/15 with the undersigned individual by ACI Cox and IES Investigator Hoover.
Exit interview was conducted on 9/10/15 with the undersigned individual by ACI Cox.
