Bobbi Pradon & Daniel Pradon

Type: FOCUSED INSPECTION

Date: 14-SEP-2021

2.40(b)(2) Direct Repeat

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

There are five, adult white-tailed deer, at least five adult Nubian ibex and one sika deer with overgrown hooves, affecting the angles of their feet due to a lack of hoof trimming. The veterinarian evaluated these animals on September 9, 2021 and provided contact information for a farrier to trim the hooves. As of the date of inspection, the hooves remain untrimmed but the licensee has secured an appointment with the farrier to occur at the time of the next veterinary visit, scheduled for September 23, 2021. Until the hooves are trimmed, the veterinarian's recommendation has not been followed. Failure to appropriately maintain hooves can cause gait abnormalities which can be painful or cause injuries. The licensee needs to follow the veterinarian's recommendation.

3.80(a)(2)(iii) Critical Repeat

Primary enclosures.

In the lemur barn, there is a juvenile lemur seen outside of a primary enclosure. The animal is small enough to squeeze through the 2X4" fencing on the parents' enclosure, giving it free roam of the barn, other lemur enclosures, and potentially the outside areas of the facility through windows and doors opened in the barn to facilitate ventilation.

Primary enclosures that do not contain the animals can facilitate escape and/or injury. Primary enclosures must be constructed and maintained so that they contain the non-human primates securely.
