Type: ROUTINE INSPECTION
Date: 17-APR-2019

3.80(a)(2)(ii)

PRIMARY ENCLOSURES.

The marmoset enclosure had a heating pad with an unprotected electrical cord lying on the floor of the enclosure. This cord had small scratches and nicks on a few areas of the vinyl wire coating which suggest the marmoset may have played with it in the past. Additionally, there was an electrical cord connected to a fan hanging outside of the enclosure but located within reach or contact of the marmoset. Electrical cords within reach of marmosets creates the possibility for injury or electrical hazards to the marmosets. A facility system must be in place to ensure primary enclosures are maintained so that they protect the animals from injury.

Correct by 04/22/2019

This inspection and exit interview were conducted with the facility manager.
