Type: ROUTINE INSPECTION  
Date: 18-NOV-2025

---

### 3.125(a)

#### Facilities, general.

The indoor enclosure housing one, 4-month-old coatimundi, contained an elevated, carpeted wood platform with areas of heavily worn and frayed carpeting with long, thin strings. The enclosure also had three wooden, bird-type perches, each about 1 inch in diameter, located approximately 4 feet above the ground. Additionally, there were three circular wire bowl holders, each about 6 inches in diameter fastened to the sides of the enclosure and located approximately 4 feet above the ground. Worn and frayed carpeting poses a risk of potential foreign body ingestion to the animal. Elevated, small round perches or elevated circular metal wires are not appropriate materials for this species to climb onto and could cause animal injury. The indoor and outdoor housing facilities must be structurally sound and maintained in good repair to protect the animals from injury and to contain the animals.

Correct by 11/25/2025.

This inspection and exit interview were conducted with a facility representative.
